# Rotating Cam Limit Switches

## Product Overview

### Description

Bulletin 803 Rotating Cam Limit Switches are heavy duty control circuit devices used with machinery having a repetitive cycle of operation where motion is correlated to shaft rotation. These devices initiate contact actuation at various positions during shaft rotation. Bulletin 803 Rotating Cam Limit Switches are designed for long life and heavy duty operation.

The switch operates equally well rotating in either direction, and when mounted in any plane. Bulletin 803 devices are offered in six different styles to meet a wide range of applications. All styles make use of cams mounted on a shaft. As the shaft rotates, the cams actuate the contacts. Many options and modifications are available for most applications.

### Applications

- Assembly and Packing Machines
- Steel Forming / Heavy Metals
- Injection Molding Machines
- Punch Presses
- Waterway Gate / Lock Operations

### Style A and B — Internal Adjustment

#### Style A

- 25 Amp. N.C. double break contact
- 2 to 12 independent cam operators
- 150 RPM maximum shaft speed
- Type 1 and 4 & 13 enclosures
- Cam duration: min. 14°, max. 346°
- Left shaft extension standard

#### Style B

- 10 Amp. snap action 1 N.O. - 1 N.C.
- 2 to 12 independent cam operators
- 150 RPM maximum shaft speed
- Type 1 and 4 & 13 enclosures
- Cam duration: min. 14°, max. 346°
- Left shaft extension standard

### Style E and EF — External Timing, Internal Dwell Adjustment

#### Style E

- 25 Amp. N.C. double break contact
- 2 to 12 independent cam operators
- 150 RPM maximum shaft speed
- Type 13 enclosure
- Cam duration: min. 15°, max. 360°
- Left shaft extension standard
- External timing adjustment screw located at bottom of enclosure (not shown)

#### Style EF

- 25 Amp. N.C. double break contact
- 2 to 12 independent cam operators
- 150 RPM maximum shaft speed
- Type 13 enclosure
- Cam duration: min. 15°, max. 360°
- Left shaft extension standard
- External timing adjustment screw located in front cover of enclosure

### Style F — External Timing and Dwell Adjustment

#### Style F

- 10 Amp. snap action 1 N.O. - 1 N.C.
- 2 to 12 independent cam operators
- 150 RPM maximum shaft speed
- Type 1 & 13 enclosure
- Cam duration: min. 12°, max. 348°
- Left shaft extension standard
- External screwdriver adjustment of timing and dwell while machine is in motion

### Style P — High Speed, Low Cost Internal Adjustment

#### Style P

- 25 Amp. N.C. double break contact
- 2 to 12 independent cam operators
- 400 RPM maximum shaft speed
- Type 1 enclosure
- Cam duration: min. 11°, max. 349°
- Available with cams or without cams
- Right shaft extension standard

### Ambient Temperature Range

Temperatures below 32°F (0°C) are based on the absence of freezing moisture, water, or other fluids that may solidify and impede contact operation of the control. Temperature ranges are as follows: Operating: -22°F to 150°F (-30°C to 66°C) Storage: -22°F to 200°F (-30°C to 93°C)

### Technical Terms

**Lobe** – high position of cam segments. The lobe pushes against the cam-roller assembly to activate the circuit.

**Valley** – low position of cam segments. The valley passes by the cam-roller assembly without activating the circuit.

**Keyway** – slot in shaft used to connect driven shaft to the machine. Keyway also references 0°, Top Dead Center (TDC).

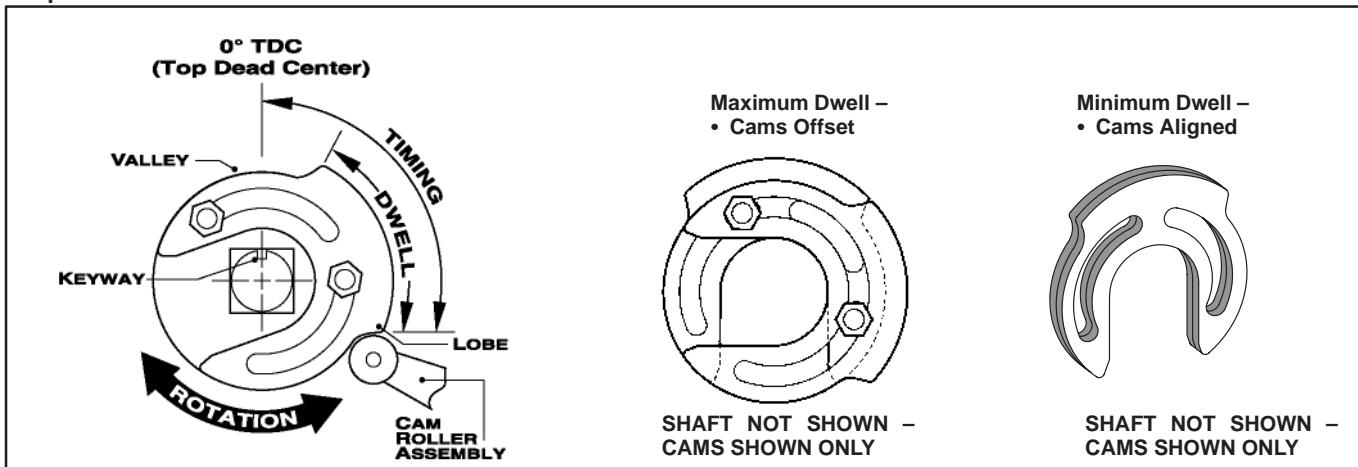

**Timing** – when the cam activates the circuit. Timing is determined by the position of the cam on the shaft (in reference to keyway/TDC). For example, when a cam is positioned at a 90° angle, the circuit will activate when the cam is 90° from TDC.

**Dwell Time** – amount of time cam lobe activates the circuit. Dwell is determined by the size of the cam lobes and positioning of the cam segments.

**Maximum Dwell Time** – when lobes of both cam segments are offset to the maximum angle.

**Minimum Dwell Time** – when lobes of both cam segments are aligned.

**Figure 1**  
 Graphics to Illustrate Technical Terms

### Theory of Operation

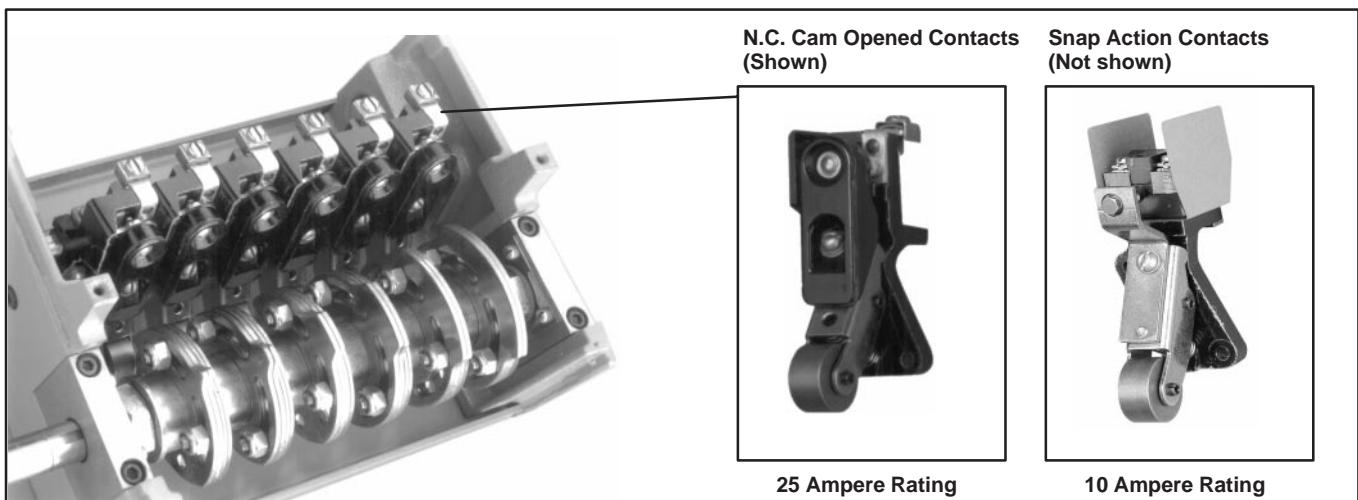

Bulletin 803 Rotating Cam Limit Switches have the same basic mechanical structure, including the following:

- 2–12 circuits with cam opened contact assembly or snap action contact block assembly
- spring-loaded cam-roller assembly mounted to the contact base

- 2–12 cam assemblies with two adjustable cam segments per cam
- rotating shaft

See Figure 2. As the shaft rotates on the shaft, the cam lobes push against the cam-roller assembly activating the circuit, the cam valley passes by the cam-roller assembly returning the contact to its normal state. The position of the cam on the shaft (timing) determines when the circuit will activate within the 360° rotation cycle. The size of the lobe and the positioning of the cam segments determine how long the circuit will be activated (dwell). Setting timing and dwell for each circuit determines machine operation.

**Figure 2**  
 Basic Mechanical Structure

# Rotating Cam Limit Switches

## Technical Data

### Adjusting Dwell and Timing

#### Internal Adjustments

**Styles A, B and P** have internal dwell and timing adjustments. **Styles E and EF** have internal dwell adjustments. Internal timing and dwell adjustments must be made when the device is not moving. To make adjustments, remove cover, loosen cam bolts, and rotate cams to the required operating position. Bulletin 803 devices have angular degree scales on the cam mounting plate or on the shaft for ease of setting. When cams are set in position, tighten cam bolts and install the cover.

#### External Adjustments

**Style F** has external dwell and timing adjustments. Both adjustments can be made with a screwdriver while the device is in motion. **Styles E and EF** have external

timing adjustment. Timing adjustments can be made with a screwdriver while the device is in motion.

#### Shaft Extensions

Shaft extension is defined as seen from the front of the device. Left shaft extension is standard for **Style A, B, E, EF and F**. Right shaft extension is standard for **Style P**. Non-standard left, right and double shaft extensions can be ordered as Modifications. See page 13-9.

#### Contacts

##### 25 Ampere Normally Closed Contacts

Normally closed cam opened double break contacts are rated at 25A continu-

ous current. When using normally closed contacts, the cam lobe engages the cam-roller to open the normally closed contact.

#### 10 Ampere Snap Action Contacts

Single pole double throw (1 N.O. - 1 N.C.) snap action contacts are rated for 10A continuous current. Snap action contacts have NEMA rating designation A600. When using snap action contacts, the cam lobe engages the cam-roller causing the contacts to snap over. The normally closed contact opens and the normally open contact closes.

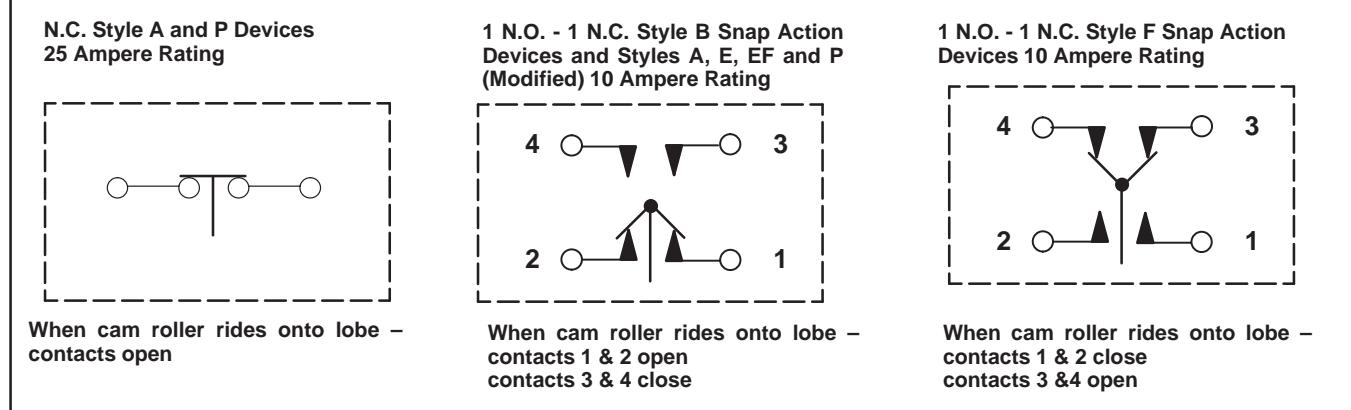

### Normally Closed Contact Ratings

Maximum AC Voltage 60 or 50 Hertz	Maximum AC Contact Ratings					Maximum DC Contact Ratings	
	Amperes		Continuous Carrying Current	Voltamperes		Voltage Range	Amperes
	Make	Break		Make	Break		
120	150	15	25	18000	1800	115-125	2.5
240	75	7.5	25	18000	1800		
480	37.5	3.75	25	18000	1800	230-250	1.0
600	30	3	25	18000	1800		

### Snap Action Contact Ratings—NEMA A600

Maximum AC Voltage 60 or 50 Hertz	Maximum AC Contact Ratings			Maximum DC Contact Ratings	
	Amperes		Continuous Carrying Current	Voltage Range	Amperes
	Make	Break			
120	60	6.0	10	115-125	0.4
240	30	3.0	10	230-250	0.2
480	15	1.5	10	550-600	0.1
600	12	1.2	10	—	—

### Contact Wiring Configurations

### Ordering Bulletin 803 Rotating Cam Limit Switches

When ordering a Bulletin 803 Rotating Cam Limit Switch with cams, **two catalog numbers must be specified** (excluding Style F) on the same order item. The **first catalog number** is used to order the basic device, including the number of circuits needed and any modifications. The **second catalog number** is a Cam Code used to specify the type of cams needed for the application.

### How to Order

#### Step 1: Basic Device —

Select a catalog number for the basic device. .... See pages 13-6 thru 13-8.

#### Step 2: Modifications —

If required, add the appropriate modification suffix code(s) to the catalog number of the basic device. .... See page 13-9.

#### Step 3: Cam Code —

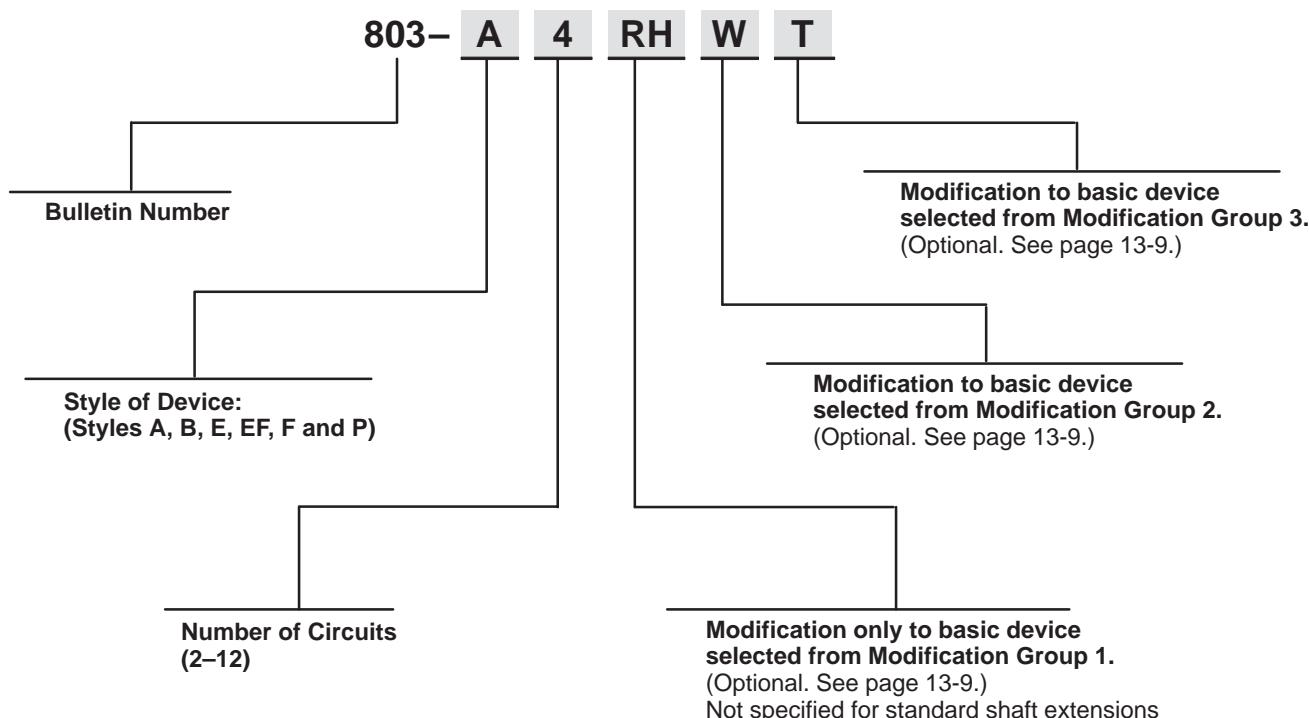

Specify the cam code. .... See pages 13-10 and 13-11.

#### Step 4: Factory Options —

Factory set cams. .... See page 13-12.

### Catalog Number Explanation

**Note:** Catalog numbers must not include blank spaces.

**Typical shaft torque per cam for Bulletin 803 Styles A, B, E, EF, F and P.**

- .5 inch pounds with cam roller in valley.
- 7 inch pounds when cam roller rides up cam ramp.
- 3 inch pounds when cam roller rides on lobe.

① See Cam Selection, page 13-10.

② Cams may be ordered separately as Cam Kits (mounting hardware included). See "Cams for Style P" table on page 13-11.

### Ordering Modifications

Modifications are ordered by adding the appropriate modification suffix code to the catalog number of the basic device. Modifications are listed in three groups, Modification Group 1, 2 and 3. Suffix codes should be added to the catalog number in the order they are presented. For example, if your device requires a modification from Group 1 and 2, list the suffix code from Group 1 first.

### Modification Group 1

#### Single Shaft Extension

Description	Extension Type	Suffix Code	*
Left shaft extension is standard for <b>Styles A, B, E, EF and F</b> . Right shaft extension is standard on <b>Style P</b> . For a non-standard shaft extension, select required shaft extension from table and add the suffix code to the catalog number.	Right Hand Extension	RH	
	Left Hand Extension	LH	

#### Double Shaft Extension

Extension Type	Suffix Code	*		
		Type 1 Style A, B, & P	Type 4 & 13 Style A, B, E & EF	Type 1 & 13 Style F
Double Shaft Extension	X			

### Modification Group 2

#### External Adjustment Sprocket – Factory Modification Only

Description	Suffix Code	*
An external adjustment sprocket is available for factory modification only for <b>Style A, B and P</b> switches that have chain drive sprockets. This provides a means of changing the relative position between the driving mechanism and the shaft. While the device is stopped, pull out the knurled knob to disengage the spline, allowing the cam shaft to be turned in 5° increments. The external adjustment sprocket is for a 0.38" (9.53 mm) No. 35 chain. Sprocket has 48 teeth with a pitch diameter of 5.73" (145.64 mm).	W	

#### Speed Reducer

Description	Gear Ratio	Suffix Code	*
Speed reducers with various gear ratios are available for all device styles. Select required gear ratio from table provided and add the suffix code to the catalog number. To order a speed reducer with a gear ratio not listed, add the letters "RY" and desired gear ratio. For example, the complete suffix code for a 75 to 1 gear ratio is RY75TO1.	20:1	R	
	40:1	RA	
	60:1	RB	
	80:1	RC	
	100:1	RD	
	120:1	RE	
	150:1	RF	
	Customer Provided	RY ---TO -	

### Modification Group 3

#### Internally Adjustable Cams

Description	Substitution	Suffix Code	*
Internally adjustable cams are available for use with <b>Style F</b> only. Internally adjustable cams can be adjusted only when the shaft on the limit switch is stopped. To substitute a selected number of internally adjustable cams, add the letter "P" and the number of cams to be substituted. To substitute internally adjustable cams for all cams in the device, add the letter "T". As standard, substituted cams are mounted starting at the opposite end of the standard driven shaft extension.	Substitute a select number of cams	P _____ (Code must include the letter "P", and the number of cams)	
	Substitute all cams	T	

# Rotating Cam Limit Switches

## Cam Selection

### Ordering Cams

Bulletin 803 devices require a complete catalog number for the Rotating Cam Limit Switch, and a separate cam code for the required cams. As shown in the Example Cam Code listed below, the cam code is used to identify style, shaft extension and cam code designators.

### Specifying Degrees of Rotation

Cam Code Designators specify number of cams required and degrees of rotation for each cam. Degrees of Rotation determines how long (dwell time in degrees) the cam will activate the circuit during the 360° rotation cycle.

For example, refer to the Cam Code Designator Table entitled “**Cams for Style A**” on page 13-11. If you select **Cam Code Designator 1**, the cam will open a normally closed contact for 24 to 29° and close the contact for 331 to 336° (depending on the minimum/maximum dwell time setting).

cams. See Example Cam Code on this page. Specify a Cam Code for each cam position. If no cam is required, place an “X” in that position. When ordering a device with double shaft extension for **Styles A, B, E and EF**, the cam sequence starts from the left. When ordering double shaft extension for **Style P**, cam sequence starts from the right.

### Cam Code Designator Sequence

Cam Code Designators must be entered into the Cam Code in sequence starting from the standard driven shaft extension, left or right. The cam closest to the shaft extension is in the “First Position”, and determines the sequence of the remaining

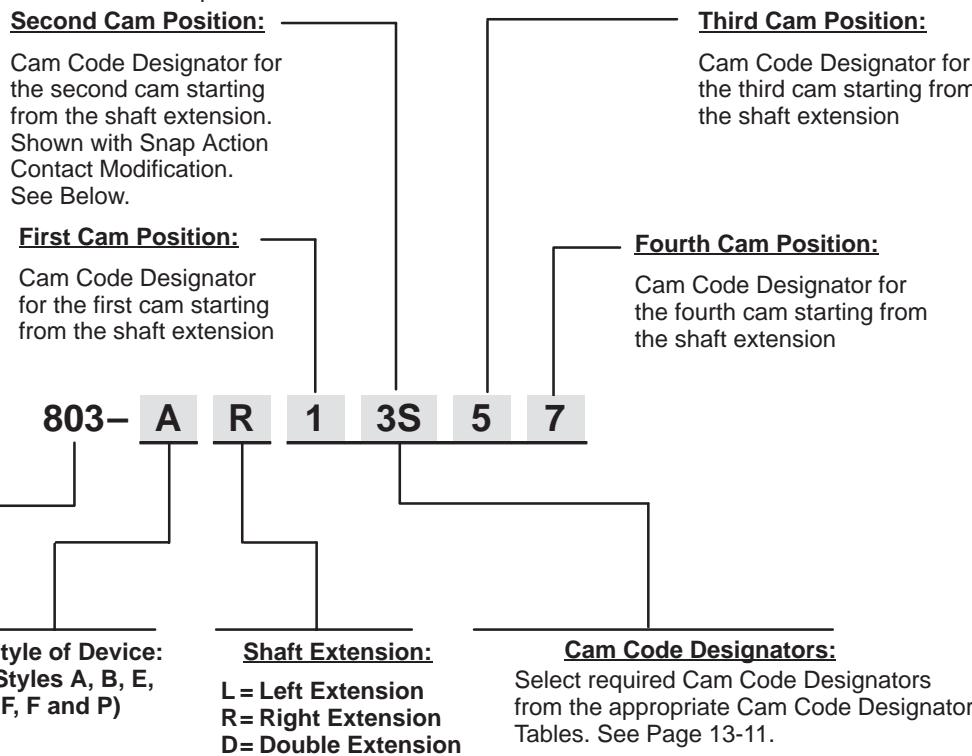

### How to Specify a Cam Code

When specifying a cam code, refer to the Example Cam Code and Cam Code Designator Tables and order as follows:

- Select and specify a code for the Style.
- Select and specify a code for the Shaft Extension.
- Select required Cam Code Designators from the appropriate tables on page 13-11. Enter Cam Code Designators in sequence, starting from the standard driven shaft extension.
- If cam is not required, place an “X” in that position.

### Example Cam Code Designator for a 4 Cam Device

**Note:** Catalog number must not include blank spaces.

### Snap Action Contact Modification

Snap Action contacts are available for **Styles A, E, EF, and P**. Add the letter “S” in the desired position in the cam code. For pricing consult your Master Price List or your nearest Allen-Bradley Sales Office.

Example of factory order entry with cams (not applicable to **Style F**):

Enter Order: **803-Special**

In Memo Text Enter: **803-A4**  
**803-AL13S57**

① This is a special cam which can only be used with snap action contact units.  
 ② Kit includes two cams, and mounting hardware for one circuit.

# Rotating Cam Limit Switches

## Factory Options

### Factory Set Cams

To order factory set cams, specify the information listed below. For pricing consult your Master Price List or your nearest Allen-Bradley Sales Office.

1. Specify cam number, cam code designator, timing and dwell of each cam starting from the standard driven shaft extension.
2. Specify shaft rotation (clockwise or counterclockwise) **facing end of shaft opposite driven end of shaft**.
3. A Degree Specification Table and a Target Table are required. See typical examples below.

### Degrees Specification Table

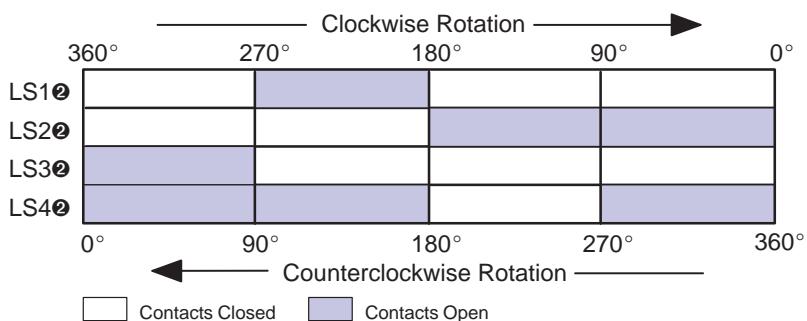

**Clockwise Shaft Rotation: viewed from opposite driven shaft end**

Cam Switch Position ①	Contacts	
	Degrees Open	Degrees Closed
LS1②	180°	270°
LS2	0°	180°
LS3	270°	0°
LS4	180°	90°

① Switch and cam position starting from the standard driven shaft extension.

### Target Table

**Clockwise Shaft Rotation: viewed from opposite driven shaft end**

② Switch position.
